

Backend / DB Update Notes (Short)

1. Parse JSON fields (IMPORTANT)

These come as strings from Postman:

- platform_type
- product_features
- we_assure

👉 Convert before saving:

```
JSON.parse(req.body.platform_type)
JSON.parse(req.body.product_features)
JSON.parse(req.body.we_assure)
```

2. Fix file upload (product_banner)

- Use multer req.file
- Store only filename in DB
- Save path like:

uploads/products/filename.jpg

3. Static folder must match

Ensure backend has:

```
app.use("/uploads", express.static("uploads"));
```

4. Keep image path consistent

Either store:

- products/filename.jpg (recommended)
OR
- full URL

❌ Don't mix formats

5. DB columns are TEXT

So arrays must be:

- JSON string on insert
- parsed JSON on read
